01

CHAPTER ONE

The Shift That's Happening Right Now

Why this is the inflection point most people will miss — and what to do about it today.

> *"The best employees don't sleep. The best AI employees never need to."*

CHAPTER 1: The Shift That's Happening Right Now

There are two kinds of people in 2026. The first kind uses AI as a **tool**. They open ChatGPT, type a question, read the answer, close the tab. They do this five times a day and call themselves "AI-powered." They're not. They're just using a slightly faster Google.

The second kind uses AI as a **team**. They've built agents — autonomous software that runs on a schedule, monitors things, makes decisions, and delivers results. They wake up to finished work. They clock out and their operation keeps running. They are not doing more. They are doing *less*, while their AI does more.

This book is for the second kind — or for anyone who wants to become the second kind.

WHAT CHANGED IN 2025–2026

The shift happened when AI got three things it never had before:

🧠 MEMORY

- Agents remember your name, your business, your projects
- Context persists across sessions, days, weeks
- No more repeating yourself every conversation

⚡ TOOLS + SCHEDULING

- Send emails, search the web, write files, post content
- Run on a schedule with no human pressing "go"
- Work while you sleep, work while you work

These three ingredients — memory, tools, and scheduling — created the agent era. OpenClaw is the platform that puts all three together for regular people, for free, running on your own hardware.

THE OPPORTUNITY NOBODY IS TALKING ABOUT

> 💡 **The gap is enormous.**
> Right now, most people who know OpenClaw exists are developers and tech people. Most business owners, content creators, and side-hustle builders have never heard of it. That gap is your opportunity.

The person who figures out how to use AI agents for their business — while their competitors are still manually doing everything — wins. Not by a little. **By a lot.**

By the end of this book, you'll have:

1. A fully configured OpenClaw setup on your machine
2. A team of AI agents running 24/7 on a schedule
3. Automated workflows for content creation, scheduling, and reporting
4. The blueprints to hand tasks off to local models — no API fees, no per-call costs
5. A system that generates revenue while you sleep

Let's build it.

02

CHAPTER TWO

What OpenClaw Actually Is

The framework, the philosophy, and the most important tool decision you'll ever make.

CHAPTER 2: What OpenClaw Actually Is (And What It Isn't)

WHAT OPENCLAW IS NOT

It is not ChatGPT. ChatGPT is a conversation. When you close the tab, it forgets you existed. No recurring tasks, no scheduled actions, no autonomous behavior.

It is not an app. OpenClaw runs as a daemon — a background process — on your computer. It communicates through Discord or Telegram.

It is not a cloud service. You own the installation. Your data stays on your machine. No per-message fees, no usage caps.

It is not just one AI. OpenClaw is the orchestration layer. It connects to whatever AI model you want — Claude, local models via Ollama, even Gemini.

WHAT OPENCLAW IS

A persistent AI operating system that runs all day, every day, knows who you are, and remembers what happened yesterday.

An agent orchestration platform where multiple named agents — each with a different model and purpose — work in parallel, on schedule, without you.

A workflow engine where cron jobs trigger any task at any time. Once set up, these run forever.

⚡ THE SINGLE MOST IMPORTANT SETUP DECISION: USE ANTHROPIC, NOT OPENAI

> 🔑 **This is not optional advice. It's the foundation of everything.**
> If you set up OpenClaw with ChatGPT (OpenAI), you will spend more time managing your AI than it saves you. If you set it up with Claude (Anthropic), it will actually feel like having an employee.

Here is the core difference, stated plainly:

❌ CHATGPT / OPENAI	✅ CLAUDE / ANTHROPIC
Constant clarification questions — stops at every ambiguity	Handles ambiguity independently — makes a decision and keeps going
Loses focus in long system prompts — follows the first few rules, drifts from the rest	Follows complex system prompts completely — every rule, every time
Built for conversation, not for action — reactive by design	Built for agentic, multi-step autonomous work — proactive by design
Requires constant hand-holding through multi-step tasks	Run overnight workflows and wake up to finished work
Overnight tasks fail because the model keeps asking "are you sure?"	Executes, reports, adapts — without needing you to confirm every step

When you give Claude an incomplete instruction, it fills the gap intelligently. When you give ChatGPT an incomplete instruction, it stops and asks you ten clarifying questions. In an autonomous operation that runs at 3AM, that difference is everything.

Claude just gets things done. Give it a task with 15 rules, and it reads all 15 and follows them. Give it a goal, and it figures out the path. Give it access to your tools, and it uses them without being babysat.

> 💸 **Cost: Not a barrier.**
> Anthropic API access starts at $5 — enough to run hundreds of tasks. A single overnight session of work would cost you a few cents. The ROI is immediate.

THE FIVE CORE CONCEPTS

1. Sessions — A conversation thread with memory. Main sessions are your primary workspace. Isolated sessions spin up for specific tasks and clean up.

2. Agents — Named, configured AI with a specific purpose. FELIX writes content. SCOUT finds trends. TYLER files documents. Each has its own model and schedule.

3. Cron Jobs — Scheduling system. "Run this task every X hours." This is how you build automation that runs without you.

4. Skills — Modular capability packs. Install a skill, your agent gains a new ability: post to social media, read PDFs, search the web.

5. Memory — Persisted as files in your workspace. Agents read memory before tasks — they know everything that happened before.

WHY THIS ARCHITECTURE WINS

FACTOR	CHATGPT / CLAUDE.AI	OPENCLAW
Runs on a schedule	❌ No	✅ Yes
Persistent memory	❌ Limited	✅ Full
Multiple agents	❌ No	✅ Yes
Your data stays local	❌ No	✅ Yes
Monthly cost	$20–$200/month	Free (hardware you own)
Works while you sleep	❌ No	✅ Yes

03

CHAPTER THREE

Building Your AI Team

Agents with names, roles, and an org chart that runs itself 24/7.

CHAPTER 3: Building Your AI Team

Stop thinking about AI as a single tool. Start thinking about it as an **org chart**. In a real business you have specialists, managers, and support staff. Your AI team works the same way.

THE @OPENCLAWINFO AGENT STACK

Here is the exact team running the @openclawinfo operation:

👔 **BOSS — Claude Sonnet (Main Session)**
General Manager. Delegates to specialists, approves output, handles anything that doesn't fit a specialist. This is the agent you talk to.

✍️ **FELIX — llama3.3:70b (Every 6h)**
Content Writer. Takes trending topics from SCOUT and writes complete TikTok/Reel scripts, carousels, and captions. Posts to #press for approval.

🔍 **SCOUT — qwen2.5:14b (Every 2h)**
Research Agent. Scans for trending AI automation topics, synthesizes findings, drops into #radar channel. Feeds FELIX's pipeline.

📋 **REX — qwen2.5:32b (9AM daily)**
Briefings Agent. Reads overnight logs, emails, calendar. Produces the morning briefing. Routes and classifies incoming data.

📁 **TYLER — Claude (2AM daily)**
PDF Archivist. Scans desktop for new documents, classifies them, files into structured folder hierarchy. Reports what was filed.

🌙 **NOVA — Claude (3AM daily)**
Overnight Employee. Picks the highest-value overnight task, executes it fully, reports to Discord. This is your night shift.

WHY LOCAL MODELS?

FELIX, SCOUT, and REX all run on **local models via Ollama** — not Claude or GPT-4. Here's why:

$3	$0	120×
PER 1M TOKENS (CLAUDE API)	PER 1M TOKENS (LOCAL OLLAMA)	TIMES FELIX RUNS PER MONTH

FELIX writes content scripts every 6 hours — 4 times a day, 120 times a month. At Claude prices, this adds up. With a local model on hardware you already own? **Free. Forever.**

The rule: Use Claude for complex reasoning and customer-facing work. Use local models for high-frequency, templated tasks where "good enough" beats "perfect."

BUILDING YOUR STACK: START HERE

TIER	WHAT TO BUILD	TIME	RESULT
Week 1	Main assistant + 9AM morning briefing cron	~2 hrs	AI-powered mornings
Week 2	Add SCOUT + FELIX + Postiz scheduling	~3 hrs	Full content pipeline
Week 3–4	Add TYLER + NOVA + full cron schedule	~4 hrs	24/7 autonomous operation

04

CHAPTER FOUR

Your First Autonomous Workflow

Step-by-step first agent setup in under 60 minutes. No coding. No experience needed.

CHAPTER 4: Your First Autonomous Workflow in 60 Minutes

Stop overthinking. Let's get one real autonomous workflow running in 60 minutes and feel the difference between *thinking about* AI automation and *living it*.

STEP 1: INSTALL OPENCLAW (10 MIN)

```
npm install -g openclaw
openclaw --version
openclaw gateway start
```

> 💡 **No Node.js installed?**
> Download it first from nodejs.org, then run the command above. The gateway is the background process that keeps OpenClaw running — start it once and it runs forever.

STEP 2: CONNECT DISCORD (15 MIN)

Discord is your command center. Every conversation with your agents, every report, every content draft — Discord is where it lands.

1. Go to **discord.com/developers/applications** → New Application
2. Go to "Bot" in the sidebar → "Reset Token" — copy the token
3. Enable all three **Privileged Gateway Intents**
4. OAuth2 → URL Generator → select `bot` → Administrator permissions → invite to your server

```
openclaw configure --section discord
```

STEP 3: YOUR FIRST CRON — MORNING BRIEFING (15 MIN)

Add this to your config. Every morning at 9AM, a briefing appears in Discord:

```
{
  "name": "Morning Briefing",
  "schedule": { "kind": "cron", "expr": "0 9 * * *", "tz": "America/Toronto" },
  "payload": {
    "kind": "agentTurn",
    "message": "Generate today's morning briefing. Read yesterday's memory files.
Include: date, overnight tasks completed, calendar events today, one focus reminder.
Under 200 words. Post to #oc.",
    "timeoutSeconds": 120
  },
  "sessionTarget": "isolated",
  "delivery": { "mode": "announce", "channel": "oc" }
}
```

```
openclaw gateway restart
```

THE 60-MINUTE CHECKPOINT

✅	✅	✅
OPENCLAW INSTALLED	DISCORD CONNECTED	9AM BRIEFING CRON SET

Tomorrow morning, your first automated briefing will appear. That feeling — of something working without you — is what this entire book is about. Chase it.

05

CHAPTER FIVE

The Content Machine

Never write another caption again — the full SCOUT + FELIX social media autopilot.

CHAPTER 5: The Content Machine — Never Write Another Caption Again

Content is the game. The people who post consistently win. The people who automate the production pipeline? They operate at a completely different level.

THE PIPELINE ARCHITECTURE

🔍 SCOUT runs every 2 hours → finds trending topics → posts to #radar

↓

✍️ FELIX runs every 6 hours → reads #radar → picks top topic → writes complete script

↓

👤 YOU → review #press → ✅ approve or ❌ reject

↓

📱 Approved → Postiz → TikTok + Instagram at peak times

SCOUT'S SYSTEM PROMPT

```
You are SCOUT, a research agent for @openclawinfo.
Every time you run, research what's trending in:
- AI automation + OpenClaw tools
- Online business automation + "AI did this for me" stories

Output: TOP TREND, ANGLE, AUDIENCE PAIN, FORMAT, SOURCES.
Keep under 200 words. Post to #radar.
```

FELIX'S SYSTEM PROMPT

```
You are FELIX, content writer for @openclawinfo.
One Peak Hook Formula:
HOOK (0–3s): One bold statement that stops the scroll.
BODY (3–45s): 3–5 punchy, specific, actionable points.
CTA (45–55s): One clear action only.
After script: IG Caption, TikTok Caption, 18 Hashtags.
Read latest #radar. Write one complete script. Post to #press.
```

THE APPROVAL WORKFLOW

Create a `#press` channel in Discord. FELIX posts there. You review when free:

- ✅ **Checkmark** → approved → paste into Postiz → schedule for peak time
- ❌ **X** → scrapped, FELIX moves to next angle
- 🔄 **Arrows** → revision needed → reply in thread with specific changes

PEAK POSTING TIMES

PLATFORM	MORNING	MIDDAY	EVENING
TikTok	7–9AM	12–2PM	7–9PM
Instagram	6–9AM	12–2PM	8–10PM

THE 3-2-2 WEEKLY CONTENT MIX

3×

SCRIPT VIDEOS/WEEK (FELIX WRITES, YOU FILM)

2×

CAROUSEL POSTS/WEEK (FELIX WRITES, CANVA IN 20 MIN)

2×

BTS/STORY POSTS (RAW, AUTHENTIC, ZERO PRODUCTION)

06

CHAPTER SIX

The Overnight Employee

What's running at 3AM while you sleep — NOVA's full decision framework.

CHAPTER 6: The Overnight Employee — Automating at 3AM

While you're sleeping, NOVA is reading your memory files, choosing the highest-value task, executing it completely, and filing the output in your workspace. By the time you wake up, work is done that you didn't have to do.

NOVA'S PRIORITY FRAMEWORK

PRIORITY	CONDITION	NOVA'S ACTION
1 — Urgent	Deadline tomorrow, no content ready	Write the missing content immediately
2 — High Value	PDF book incomplete, calendar thin	Write next 2 chapters or 3 scripts
3 — System	Agent prompts stale, memory outdated	Update prompts, clean memory files
4 — Default	Everything else is OK	Write 3 complete content scripts

NOVA'S SYSTEM PROMPT

```
You are NOVA, overnight autonomous employee for @openclawinfo.
You run at 3AM. The owner is sleeping. Pick ONE task. Execute completely.

CONTEXT: Read memory/ files and MEMORY.md first.
TASK: Pick from priority list above.
RULES: Do not half-finish. Save output to /workspace/docs/ with today's date.
REPORT: Send Discord message to #oc:
🌙 Overnight Report – [date]
Task I chose: [what and why]
Deliverable: [file + word count + location]
Why this moves the needle: [1-2 sentences]
💬 NOVA – while you slept, we worked.
```

NOVA'S CRON CONFIGURATION

```
{
  "name": "NOVA Overnight Employee",
  "schedule": { "kind": "cron", "expr": "0 3 * * *", "tz": "America/Toronto" },
  "payload": {
    "kind": "agentTurn",
    "message": "Run your overnight routine. Read context, pick the best task, execute
fully, save output, send Discord report.",
    "timeoutSeconds": 0
  },
  "sessionTarget": "isolated"
}
```

⚡ **timeoutSeconds: 0 means no timeout.**
NOVA gets as long as it needs to finish the task. Overnight jobs can take 10–30 minutes for complex writing work. Never cap this.

READING YOUR OVERNIGHT REPORT

Every morning, check `#oc` in Discord. NOVA's report is waiting. Your job: open the file, skim it, decide what to do with it. NOVA did the work. **You make the call on whether it's good.**

Over time, as you trust NOVA's output, your review gets faster. Eventually you just read the report, see it's on track, and move on with your morning. That's the feeling of having a real employee.

07

CHAPTER SEVEN

Automating Your Business Documents

Read, sort, file, and respond — every document handled automatically while you sleep.

CHAPTER 7: Automating Your Business Documents

Every business drowns in documents. Contracts, invoices, proposals, reports, filings. Most people spend hours per week just organizing paper. TYLER eliminates that entirely.

TYLER: YOUR DOCUMENT ARCHIVIST

TYLER runs at 2AM every night, reads every new document on your desktop, figures out what it is, and files it in the right place — automatically.

```
You are TYLER, an intelligent document archivist.
For every document provided:
1. Identify the document type (invoice, contract, proposal, report, receipt...)
2. Extract key metadata: client name, date, amount (if applicable)
3. File to: Documents/[Category]/[ClientName]/[YYYY-MM]/[filename]
4. Log every action to tyler-activity.log
5. Send Discord summary if you processed more than 3 documents
Rule: If uncertain about classification, place in /Review/ and flag it.
```

⏱️ **Result: Zero time spent on document organization.**
TYLER runs silently at 2AM. By the time you wake up, everything is filed exactly where it should be. If something unusual came in overnight, you'll have a Discord notification waiting.

TYLER'S CRON CONFIGURATION

```
{
  "name": "TYLER Document Archivist",
  "schedule": { "kind": "cron", "expr": "0 2 * * *", "tz": "America/Toronto" },
  "payload": {
    "kind": "agentTurn",
    "message": "Run TYLER document filing routine. Check ~/Desktop and ~/Downloads for
new files. Classify, file, and log results. Send Discord summary if 3+ documents
processed.",
    "timeoutSeconds": 600
  },
  "sessionTarget": "isolated"
}
```

THE LEAD FOLLOW-UP SYSTEM

Beyond documents, the same approach handles lead follow-ups. When someone contacts your business, an automated sequence ensures no lead ever falls through the cracks:

DAY	ACTION	WHO SENDS IT
Day 1	Acknowledgment (within 3 minutes)	Agent — automatic
Day 2	Value piece relevant to their interest	Agent — scheduled
Day 4	"Here are 3 things that match what you're looking for"	Agent — scheduled
Day 7	Check-in: "Where are you in the process?"	Agent — scheduled
Day 14	Long-form value guide (PDF or article)	Agent — scheduled
Day 30	"The landscape just shifted — here's what it means for you"	Agent — scheduled
Day 60	"Still here when you're ready" — low pressure, high trust	Agent — scheduled

Each touchpoint references the lead's specific situation. They think you're personally thinking about them. You wrote the templates once. The agent executes them forever.

CHAPTER EIGHT

Applying OpenClaw to Your Industry

How any business type saves time and makes money — the universal patterns that work everywhere.

CHAPTER 8: Applying OpenClaw to Your Industry

OpenClaw solves the same three problems across every business type. The agents don't change. Only the instructions do.

THE THREE UNIVERSAL PROBLEMS OPENCLAW SOLVES

📧 **1. Inbox Overload**
Hours wasted on messages that don't need you. An agent reads, sorts, flags, and drafts responses — you only see what truly requires a human decision.

📞 **2. Follow-Up Chaos**
Leads, clients, partners — they all need timely follow-up. Without a system, things fall through. With OpenClaw, follow-ups are tracked and sent automatically.

📱 **3. Content Drought**
Staying visible requires consistent content. Most people can't keep up. OpenClaw's content agents handle ideation, drafting, scheduling, and posting — completely automated.

WHO IT WORKS FOR

BUSINESS TYPE	BEST USE CASE	TIME SAVED
Freelancers & Consultants	Auto-draft proposals, chase invoices, generate case studies	5–8 hrs/week
E-Commerce Owners	Product descriptions, review responses, promotional content	6–10 hrs/week
Coaches & Course Creators	Onboarding emails, lesson outlines, social proof posts	4–7 hrs/week
Agency Owners	Brief writers, compile reports, send client updates	8–15 hrs/week
Service Businesses	Lead intake, appointment follow-up, document filing	5–10 hrs/week

THE PATTERN IS ALWAYS THE SAME

1. Identify the task that repeats in your business

↓

2. Write clear instructions — the agent's job description

↓

3. Set a trigger: time-based, event-based, or on-demand

↓

4. Test with 5 real examples

↓

5. Let it run

The industry doesn't matter. A freelancer's "follow up on unpaid invoices" uses the same framework as an agency's "send weekly client reports." Write the instructions. Set the cron. Done.

🎯 **Start with your single biggest time drain.**

Pick the one repetitive task that wastes the most hours in your week. That's your first agent. Write its instructions in one paragraph. That paragraph is its system prompt. Everything else follows.

09

CHAPTER NINE

Scaling Up

From one agent to a full operation — the Month 1 to Month 6 revenue roadmap.

CHAPTER 9: Scaling Up — From One Agent to a Full Operation

If you've followed this book, you have NOVA running overnight, TYLER filing documents, FELIX writing content, SCOUT generating scripts, and a digital product generating revenue. That's not a side project. That's a small autonomous company. Now let's scale it.

THE REVENUE LADDER

$0 → Free TikTok/Reel content (@openclawinfo)

↓

$9.99 → PDF book — "Full OpenClaw AI Money Making Automation Blueprint"

↓

$47 → OpenClaw Starter Kit — workspace template + 10 system prompts

↓

$197 → The Autonomous Business Course — full video walkthrough

↓

$997 → Done-With-You — 4-week live cohort

↓

$2,997 → Done-For-You — custom agent operation build

MONTH 1 → MONTH 6 ROADMAP

MONTH	PHASE	KEY MILESTONE	REVENUE TARGET
Month 1	Foundation	All agents running, Gumroad product live, 3×/week posting	$200–500
Month 2	Momentum	TikTok 1K followers, first testimonials, content flowing	$500–1,000
Month 3	Growth	Launch $47 Starter Kit, course outline drafted	$1,000–3,000
Month 4	Acceleration	$197 course live, first cohort (10 × $997)	$5,000–12,000
Month 5	Authority	Operation fully on autopilot, Done-For-You waitlist	$10,000+
Month 6	Scale	Weekly review is your only required meeting	$20,000+

THE WEEKLY REVIEW (30 MINUTES, EVERY SUNDAY)

This is the only meeting that matters:

1. **Revenue check** — Gumroad sales, pipeline value, any new income
2. **Agent audit** — Did all agents run? Any failures? Review logs.
3. **Content review** — What performed? What flopped? Adjust the mix.
4. **Memory update** — Update MEMORY.md with anything that changed
5. **Next week's #1 priority** — What's the single most important thing?

🏆 **Rule: Automate first, delegate second, hire third.**
Never hire someone to do a task you haven't fully systematized first. If you can't explain it to an agent, you can't explain it to a human hire either.

CHAPTER TEN

The Elite Stack

Every tool, prompt, and template — copy-paste ready, under $50/month to run the full system.

CHAPTER 10: The Elite Stack — Full System Reference

AGENT STACK CHEAT SHEET

AGENT	MODEL	SCHEDULE	REPORTS TO	PURPOSE
BOSS	Claude Sonnet	On-demand	#oc	General Manager
NOVA	Claude	3AM daily	#oc	Overnight Employee
TYLER	Claude	2AM daily	#tyler	Document Archivist
FELIX	llama3.3:70b	Every 6h	#press	Content Writer
SCOUT	qwen2.5:14b	Every 2h	#radar	Research Agent
REX	qwen2.5:32b	9AM daily	#oc	Morning Briefings

RECOMMENDED TOOLS

TOOL	PURPOSE	COST
OpenClaw	Agent runtime	Free/Pro
Discord	Agent communication	Free
Anthropic API	Claude model access	~$5 to start
Ollama	Local model runtime (FELIX, SCOUT, REX)	Free
Gumroad	Product sales	10% fee only
Postiz	Social scheduling	Free tier / $29/mo
Canva	Visual content	Free/Pro

RECOMMENDED MODELS

MODEL	BEST FOR	WHERE
Claude Sonnet 4.5	Strategy, complex reasoning, autonomous overnight work	Cloud (Anthropic)
Claude Haiku 3.5	Fast tasks, high volume, classification	Cloud (Anthropic)
Llama 3.3 70B	Writing, content creation (FELIX)	Local (Ollama)
Qwen 2.5 14B	Research scripts, quick outputs (SCOUT)	Local (Ollama)
Qwen 2.5 7B	Fast classification tasks	Local (Ollama)

THE DAILY RHYTHM

```
2:00 AM — TYLER: Document filing
3:00 AM — NOVA: Overnight high-value task
8:00 AM — Morning briefing (REX or BOSS)
9:00 AM — Content post #1 (Postiz → TikTok + Instagram)
1:00 PM — Content post #2
6:00 PM — Content post #3
9:00 AM Sunday — Weekly review prompt
```

THE ELITE MINDSET

Stop thinking like an employee. Start thinking like an owner.

Employees trade time for money. Owners build systems that trade work for money — and the systems keep running while they sleep. You've just built a system. NOVA ran last night. TYLER filed your documents. FELIX is writing your content. The machines are working.

Your job is to set direction, review results, and upgrade the systems. The agents handle the rest.

Welcome to elite level.

Appendix: Quick Reference

ALL SYSTEM PROMPTS

- **NOVA (Overnight Employee)** — See Chapter 6
- **TYLER (Document Archivist)** — See Chapter 7
- **FELIX (Content Writer)** — See Chapter 5
- **SCOUT (Research Agent)** — See Chapter 5
- **REX (Morning Briefings)** — Template in Chapter 10
